Company Introduction

Acu-Tech Piping Systems is a specialist manufacturer and supplier of pipe systems for fluid / gas transfer and cable protection. Our systems are utilised in a wide range of applications across the resource, civil, plumbing and industrial sectors.

Manufactured primarily from Polyethylene (PE) and Polypropylene (PP) thermoplastics, Acu-Tech Pipe Systems incorporate the most innovative and advanced pipe system technology available.

Acu-Tech is a privately owned and operated Australian company. The founders and owners continue to manage daily operations, ensuring inspiration, leadership, flexible decision making and accountability throughout the company.

Customer Focus

With a commitment to providing the highest quality service and support, along with decades of combined experience and a positive 'can do' culture, the people behind Acu-Tech Piping Systems are committed to ensuring the long term success of your business.

The calibre and dedication of the Acu-Tech team ensures that the highest possible standards of customer support and service are provided at every stage of a project.

Our Mission

- To provide the pipeline industry with systems of the highest quality, integrity and innovation, and in doing so, to ensure that Acu-Tech "adds value" to our customers' business.
- To provide outstanding service, training and technical support to our customers, and in that way be considered as an integral part of their enterprises.
- To encourage forward thinking and innovation.
- To continuously look for ways to improve our performance.
- To maintain a comprehensive stock inventory
- To ensure that every project runs smoothly. To put our values at the centre of everything we do, now and in the future.

Our Values

- We base the relationships we have on Trust & Integrity.
- We believe our people are our most Precious asset.
- We believe good Communication is essential to a successful business, with our team, our suppliers and most of all, with our customers.
- We focus on providing Quality in all aspects of our business.
- We believe in adopting a Caring approach to people and to our environment.
- We take Pride in everything we do, and the way we do it.
- We will always emphasise Safety.

Our Vision

*To be recognised by engineers and contractors
as the industry leader in **pipeline solutions***

Products

Acu-Tech offers a complete range of piping systems for pressure and drainage applications, manufactured primarily from polyethylene (PE). The advantages of PE piping systems have been appreciated in the gas and water industries and by general industrial users for over 30 years.

Our Capabilities

- Manufacturers of HD-PE100 pipes $\varnothing$ 20mm to 800mm in lengths and coils.
Option of striping or full coating for system specific colour coding.
- Fabrication of bend and tee fittings $\varnothing$ 32mm to 800mm.
- Fabrication of $\varnothing$ 20mm to 800mm pipe spools, tanks and components to client specifications.
- Fusion Welding Training and weld/material testing.

Importing and distribution. Large inventory of:

- High quality European electrofusion and spigot fittings
- Flanges, gaskets and bolt sets.
- Valves - gate, ball, check and butterfly.
- Fusion welding equipment.
- Polypropylene PP-RCT pipe systems for hot and cold water and chemicals

Quality Assurance:

- Certified Quality Assurance Management Systems to ISO 9001 Quality management systems; and,
- ISO/TS 29001 Petroleum, petrochemical and natural gas industries - Sector specific quality management systems- Requirements for product and service supply organisations.
- HD-PE pipe WaterMark certified to AS/NZS 4130
- HD-PE electrofusion and spigot fittings WaterMark certified to AS/NZS 4129.

Market Orientated

Acu-Tech's polyethylene products find a broad range of applications in the Industrial, Mining, Plumbing and Utilities markets. The utilities of water and gas distribution are important sectors for high integrity products where the maintenance of water quality and the safe transport of gaseous fuels are of paramount importance. Industrial and Mining applications include mineral slurries, alternative energy installations in landfill gas systems, to effluent transportation. Products are widely used in pipeline installation, repair and maintenance. Acu-Tech also supplies a number of other systems, including:

- HDPE Drainage Pipe System for greasy or chemical wastes and Siphonic roof drainage.
- Polypropylene (PPR) Pipe System for above ground hot & cold water systems.

For More information

Please contact our sales team on +61 8 9238 8000 (WA), or +61 3 9338 0300 (VIC)

NOTES

Notes on the use of this catalogue:

The “Family” code shown at the top of every page refers to the fitting TYPE.

Eg: 7014 is the code for a compression coupler. The next four numbers refer to the SIZE; e.g., 0110 is the code for a 110mm fitting, 1163 for a 110mm x 63mm reducer; therefore the code for a 110mm compression coupler is 7014.0110 and a 110mm x 90mm reducer would be 7034.1190.

As always with Acu-Tech technical information, we supply it as a guide in the interest of better understanding of technical properties of our products. It represents the best information available to us at the time of publication. However, the application of such information may involve engineering judgements which cannot be correctly made without intimate knowledge of all the conditions pertaining to a specific installation. Acu-Tech does not act as a consultant in this regard; the responsibility for the use of any information or advice contained herein rests solely with the user. No warranty, expressed or implied, (other than Statutory Warranty) is given as to the information or results obtained by the use thereof, and Acu-Tech will not be held liable for any costs, direct or indirect, that may arise therefrom. All pressure ratings given are subject to applicable regulations and standards. For further information please contact our Technical team or check with your local regulatory authority.

Company policy is one of continual improvement, therefore changes in product dimensions, specifications and performance data may be made without prior notice and without incurring liability. All dimensions shown in this catalogue are intended as a guide only. If exact measurements are required, please contact our sales team.

Please contact our sales team if there is any items required which are not shown in this catalogue. We are also able to source & supply a wide range of associated products such as valves and non-standard flanges.

COMPRESSION FITTINGS OVERVIEW

FIELDS OF APPLICATION

Acu-Tech compression fittings and clamp saddles are designed specifically for connecting polyethylene pipes with an outside diameter from 16 to 110mm (200mm for clamp saddles). They are compatible with PELD, PEHD, PE40, PE80 and PE100 pipes complying with AS / NZS 4130 Series 1. They are normally used to convey drinking water and fluids at pressures up to 16 bar for generic applications. The quality of the materials used makes these fittings resistant to etching by numerous chemical substances, and to UV-rays.

The Acu-Tech Universal Fitting can be used to connect systems using PE metric Piping with existing pipes made of any material, with external diameters of 15-34mm.

OPERATING TEMPERATURES

Fittings and clamp saddles are not suitable for use with hot water for the limits dictated by the use of polyethylene pipes. Maximum operating temperatures refer to the use of polyethylene pipes; it is therefore necessary to refer to the regulations applicable in the country of use. The fittings and clamp saddles can withstand temperatures below 0°C. The table below shows the maximum operation (PFA) with changes in temperature if the liquid is water, in compliance with EN 805, EN 12201 and ISO 13761. For values falling within the set range, a linear interpolation can be obtained.

Operating T (°C)	≤ 20°	25°	30°	35°	40°	45°
PFA [bar]	16	14.9	13.9	12.8	11.8	10.8
PFA [bar]	10	9.3	8.7	8	7.4	6.7

HEALTH STANDARDS

Acu-Tech fittings and clamp saddles comply with the regulations on the conveyance of drinking water for human consumption, in accordance with the regulations applicable in numerous countries. For more information please contact our sales team.

TENSILE STRENGTH

All Acu-Tech fittings undergo tensile strength test with the loads shown in the table below, in compliance with the strictest standards and regulations.

COMPRESSION FITTINGS OVERVIEW

HYDRAULIC SEAL

Pressure rating in a mechanical fitting depends on the type of gasket used and the pressure the fitting is able to withstand when installed on the contact surfaces between the gasket itself, the pipe and fitting body.

In the study and development of Acu-Tech fittings, different solutions have been tested under the most arduous conditions at which the fittings can be subjected during operation to check the status of the pipe to be joined (circumference undersizing) and the load applied. In fact, a fitting installed in a system can be subjected to stress due to continuous variable pressure cycles, overpressure due to disturbances such as water hammer, external pressure, tensile stresses, flexibility and other loads.

A system is generally expected to last many years and the fittings must guarantee consistent performance over the life of the fitting. Tests have revealed that the type of gasket guaranteeing the best performance in all possible cases is the O-ring seal with toroidal geometry (an O-ring seal is normally used in mechanical applications).

In order to ensure the highest degree of safety at all times, it is important that the gasket compression is not linked to ring nut torque of the fitting or release of the ring nut when subjected to pressure cycles.

Acu-Tech fittings are equipped with an O-Ring seal placed firmly in a cylindrical seat and do not require any compression rings.

For fittings diameter 75, 90 and 110mm, the DELT-ONE system has been developed to provide a ring nut, a clamping ring and the bushing joined together to form a single component. The gasket is used is always the O-Ring type, like the classic model. This makes the assembly of the fitting extremely quick and easy, without affecting the safety features of the gasket.

- The ring nut (1a), the clamping ring (1b) and the bushing (1c) are joined in a single element to facilitate assembly of the fitting onto the pipe.

COMPRESSION FITTINGS

1. **Body:** Polypropylene, high-stability copolymer (PP-B) with UV protection

2. **Seal:** Nitrile rubber (NBR).

3. **Bush Ring:** Polypropylene, high-stability copolymer (PP-B) with UV protection.

4. **Clamping Ring:** Acetalic resin (POM)

5. **Nut:** Polypropylene, high-stability copolymer (PP-B) with UV protection

4. **Clamping Ring:** Acetalic resin (POM)

5. **Nut:** Polypropylene, high stability copolymer (PP-B) with UV Protection.

PN16 CLAMP SADDLES

1. **Bolts:** Galvanised steel.

2. **Clamp Saddles Base:** Polypropylene, high-stability copolymer (PP-B) with UV protection.

3. **Seal:** Nitrile rubber (NBR).

4. **Clamp Saddles Branch:** Polypropylene, high stability copolymer (PP-B) with UV protection

5. **Reinforcing Ring:** Stainless steel.

PN10 CLAMP SADDLES

1. **Bolts:** Galvanised steel.

2. **Clamp Saddles Base:** Polypropylene, high-stability copolymer (PP-B) with UV protection.

3. **Seal:** Nitrile rubber (NBR).

4. **Clamp Saddles Branch:** Polypropylene, high stability copolymer (PP-B) with UV protection

16MM ÷ 63MM ASSEMBLY INSTRUCTIONS

1. Cut the pipe squarely using special pipe cutting tools or a circular or band saw. It is advisable to use a guide box to ensure a square cut

2. Eliminate any burrs and bevel the end of the pipe to facilitate easy assembly and to prevent damage to the filling gasket. The outer surface of the pipe must be free from imperfections or indentations where the body of the fitting makes contact with the pipe.

3. Unscrew the blue nut and put it onto pipe followed by the white clamping ring. Make sure the clamping ring is in the correct position, with the largest diameter facing the fitting.

4. Press the pipe axially into the fitting, past the gasket, until it touches the internal register inside the fitting body.

5. Tighten the ring nut by hand and then use the torque wrench provided. The ring nut must be tight, but it does not need to reach the end of the fitting body.

75MM ÷ 110MM ASSEMBLY INSTRUCTIONS

1. Cut the pipe at right angles using a special pipe cutter or a circular belt saw. When using a belt saw, it is advisable to use a guide box to ensure a square cut

2. Unscrew the blue ring nut without removing the rings locked inside (integral component).

3. Place the integrated component on the pipe followed by the gasket. It is useful to lubricate the end of the pipe and the gasket with a silicone-based lubricant or other lubricant that does not affect the drinking properties of the water.

4. Press the pipe axially into the fitting until it touches the internal register inside the fitting body.

4. Tighten the ring nut by hand and then use the torque wrench provided. The ring nut must be tight, but it does not need to reach the end of the fitting body.

CLAMP SADDLE ASSEMBLY INSTRUCTIONS

1. Identify the point of installation and make sure the external surface of the pipe is free from soil, imperfections or indentations in the area of contact with the gasket. Position the gasket in the saddle seat.

2. Place the lower part of the saddle (i.e. the base) in the chosen point. Couple the upper part of the saddle (i.e. the branch) with the lower one.

3. Insert the screws from below (the bottom part of the saddle has a recess to receive the head of the screws). Tighten the nuts alternately.

4a. Drill a hole in the pipe wall being careful not to damage the saddle screw head and the O-ring. Use a spacer to avoid drilling the other side of the pipe. It would be better use a milling drill not to damage the saddle screw thread and the O-Ring and in order to reduce the scraps into the pipe.

11

ALTERNATIVE CLAMP SADDLE ASSEMBLY INSTRUCTIONS

4b. Use a white indelible felt-tip pen to draw a reference point on the pipe to allow repositioning of the saddle. Remove the saddle from the pipe.

5. Drill the hole in the wall and remove scraps.

6. Assemble the saddle according to the marked lines; to keep the hole in axis with the branch direction it can help to use a pin, such as the drill used to make the hole.

ACU-TECH TRAINING COURSES

As with all welding carried out on any material used for engineering purposes, fusion welding of polyethylene and polypropylene is a skilled operation which must be carried out by trained and accredited tradespersons. The use of untrained operators is a serious risk as it may lead to weld failures.

As part of our commitment to provide the industry with complete pipeline solutions of the highest quality and integrity, we have teamed up with Polyweld Tech Academy to offer Nationally Recognized Training courses in *Electrofusion*, *Butt Fusion* and *Extrusion welding* held either on site anywhere in Australia, or in our own purpose built training centre.

For more information and enrollments, please email training@acu-tech.com.au, or give your Account Manager a call on (08) 9238 8000 today.

- Acu-Flow DCI tapping bands from Acu-Tech are the ultimate solution for connection of branch pipe-lines to PE main pipelines for cold water.
- Constructed of epoxy coated solid ductile cast iron (DCI) with EPDM rubber seal, these fittings are designed to be durable and leak free.
- Upper and lower parts are fully rubber lined to prevent rotational movement of the tapping band on pipe

OUR CAPABILITIES AT A GLANCE

- Manufacturers of HD-PE100 pipes $\varnothing$ 20mm to 800mm in lengths and coils. Option of striping or full coating for system specific colour coding.
- Fabrication of bend and tee fittings $\varnothing$ 32mm to 800mm.
- Fabrication of $\varnothing$ 20mm to 800mm pipe spools, tanks and components to client specifications.
- Fusion Welding Training and weld/material testing.
