

PRODUCT DESCRIPTION

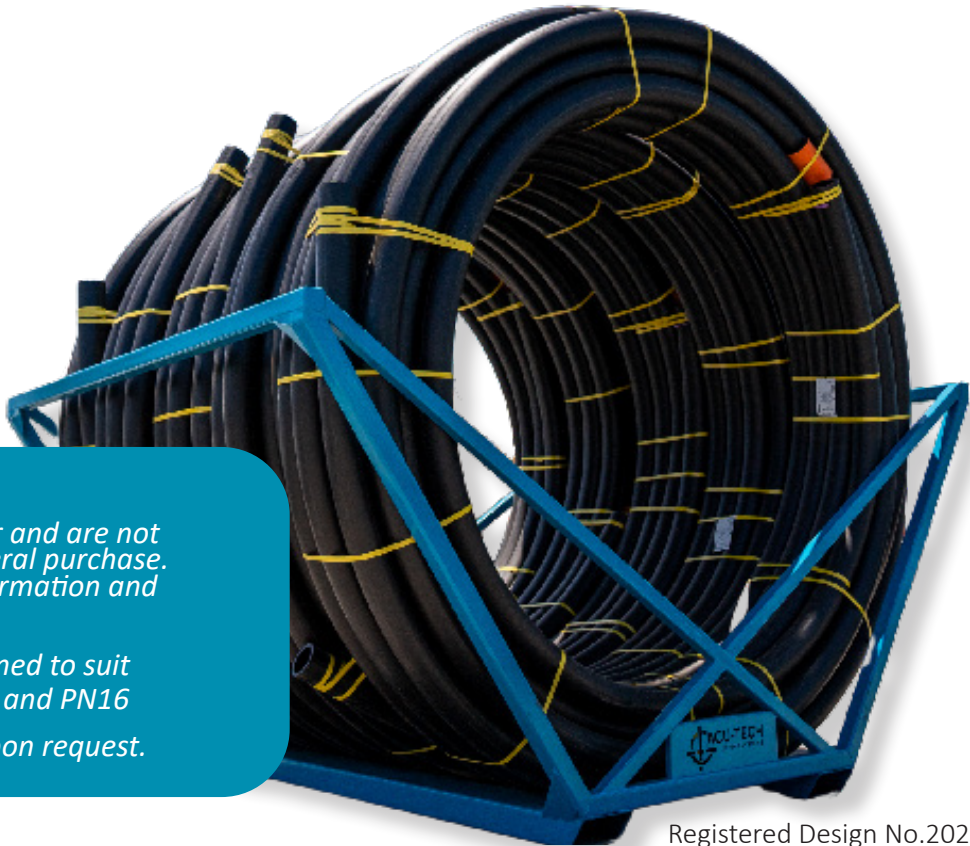

POLYPIPE COIL CRADLE®

HDPE Poly Pipe 5 Coil Cradle, designed to make transporting and storage of up to 5 large HDPE Coils easier. Our Coil Cradle is designed as a Safety Device to reduce the risks associated with the moving and transporting of HDPE Coils onsite and in transit

Fork Pockets in the base are designed to make it easy for a forklift to lift and move the coil cradle and keep the coil cradle firmly secured to the forklift.  
Forklift pockets designed to suit 7T or 16T forklift tynes.

Bracing on the coil cradle secures the HDPE Poly Pipe minimising movement and increasing user safety. There is no danger of the coils falling off the truck when loading and unloading when using our Coil Cradle.  
The low cross brace enables coils to be loaded without having to lift too high. Also allows for nesting smaller coils inside for reduced transport costs.

**Our innovative Polypipe Coil Cradle is a registered design (No. 202418135), showcasing our commitment to original and unique solutions.**

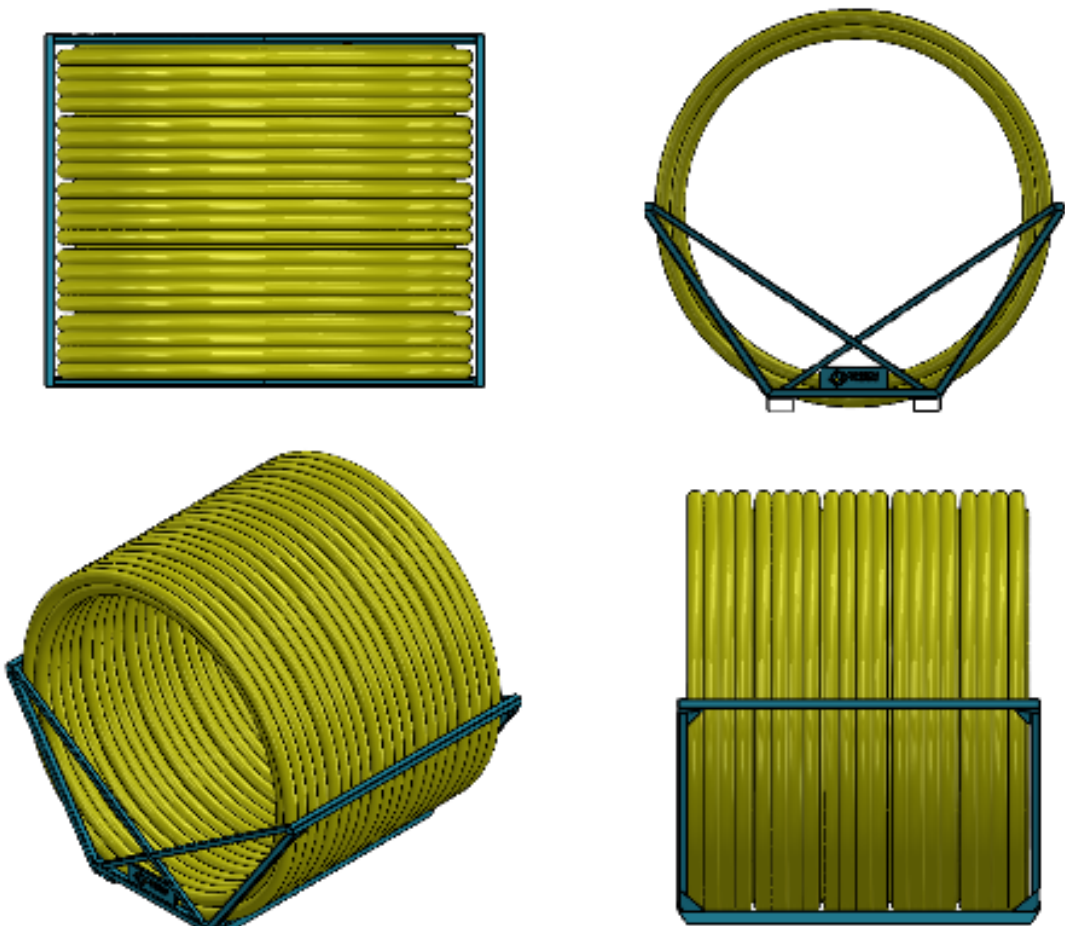

NOTE:

Cages are made to order and are not readily available for general purchase. Contact us for more information and availability.

Cage pictured is designed to suit DN1 10 PN10, PN12.5 and PN16

Other sizes available upon request.
