

Acu-Tech's polyethylene (PE) piping systems utilise a comprehensive colour-coding system, adhering to established industry standards. This system facilitates the rapid identification of pipe applications, including potable water, gas, sewer, etc. Each colour signifies a specific application, enabling engineers and installers to ensure accurate and safe installations.

Black Pipe with Yellow stripes or Full Yellow Jacket:

Fuel gases, process gases, liquefied gases under pressure

Black Pipe with Lilac/Purple stripes or Full Lilac/Purple Jacket:

Recycled or reclaimed water

Black Pipe (with no stripes): May be used for all applications except for fuel gases

Full White Jacket: Communications conduit / Above ground co-ex pipelines

Black Pipe with Blue stripes: Drinking water/potable water

Black Pipe with Red stripes: Dedicated water for fire extinguishing supply lines

Black Pipe with Red/Brown stripes: Rural imperial-size low-pressure pipe

Black Pipe with Cream stripes: Sewer pipes

Full Orange Jacket: Electrical conduit

Black Pipe with Green stripes: Rural applications (Queensland)
